

Index to Hebrew Periodicals

East View now offers the "Index to Hebrew Periodicals" (IHP), a bibliographic indexing project covering articles from Hebrew periodicals, collections, and some monographs. With an interface in Hebrew and English, IHP delivers content from 1977 in Hebrew, English, and other languages.

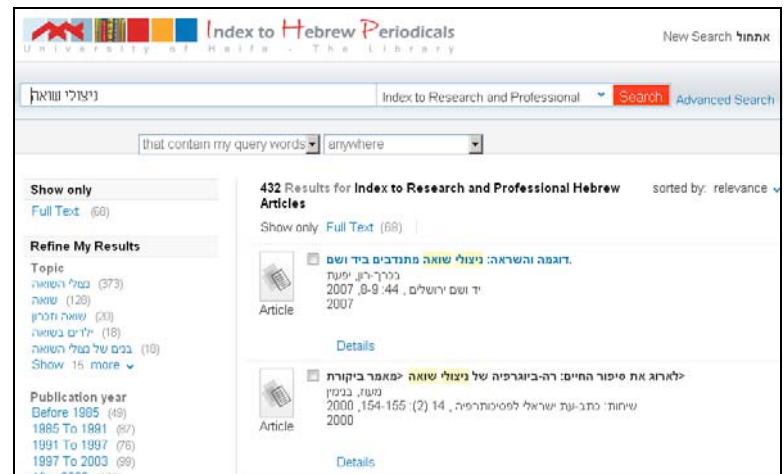

The database currently contains over 715,000 items, including:

The Index to Hebrew Periodicals (IHP)

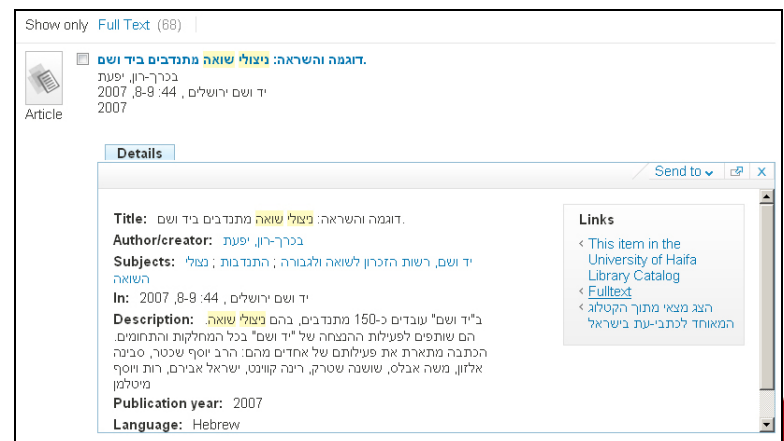

Abstracts of major Hebrew journals from 1977 to date with the exception of weeklies and newsletters. IHP covers a variety of subjects with an emphasis on Judaica, literature, education, arts, law, and current Israeli affairs (politics and society). Currently adds approx. 15,000 articles per year, from about 400 current titles. About 22,300 bibliographic records are linked to full-text articles.

The Eretz Israel Database (EID)

A project of the University of Haifa Library in cooperation with the library of Yad Yitshak Ben Zvi, the purpose of EID is to complement the IHP with additional material relating to the history, geography, and archaeology of the land of Israel. It includes non-Hebrew articles of all periods, pre-1977 articles in Hebrew, and a number of books, pamphlets, and reports. The Eretz Israel database contains approximately 28,000 items.

IHP: Index to Hebrew Periodicals

The Tel-Hai Index to Hebrew Newspapers (THIHN)

A project of Tel-Hai College Library in Upper Galilee, where indexing was produced and then input by the University of Haifa. Newspapers captured: *Ha'aretz*, *Hatsofeh*, *Al-Hamishmar*, *Davar*, *Ma'ariv*, *Yediot Aharonot* and *Hadashot* (until its closing). Particular emphasis given to longer, analytical articles on social, economic, and political topics (including "op-ed" articles) as well as significant reviews of books, exhibitions, theater, and other cultural events. THIHN contains 188,500 newspaper articles from January 1985 to April 1992, and from April 1994 to February 1997.

View full-text or full-image, if available.

Bar-Ilan Indexing Project (BIIP)

The Bar-Ilan Indexing Project, carried out by the Indexing Unit of the Wurzweiler Central Library, consists of two parallel projects: 1) an index to articles in the literary supplements of the daily Hebrew press (1985–). Includes the supplements of *Ha'aretz*, *Yediot Aharonot*, *Ma'ariv*, *Ha'tsofeh*, *Yated Ne'eman*, *Ha'modia*, *Al-Hamishmar*, *Davar* and *Hadashot* (the latter three—until they ceased publication); and 2) indexes to other Hebrew periodicals: *Orlogin* (1950– 1957), *Melilla* (1944– 1956), *Bar-Ilan* (1965– 1989) and *Molad* (1948– 1986). While there is some duplication and overlap with the other components of the IHP, the vast majority of the BIIP's 84,600 records are unique. They are particularly important in supplementing the THIHN, both in coverage of the *haredi* (ultra-orthodox) press, and in partially filling in the gap (1992 – April, 1994) in THIHN. Updated weekly.

The "Index to Hebrew Periodicals" is produced by the University of Haifa Library, Haifa, Israel.
